EXPERIENCE

Web Developer Intern

fliiTree | Sept 2020 - Dec 2020

- Maintained and rebuilt features in collaboration with one other team member.
- Technologies: MySQL, Express, Node.js, AWS EC2 & RDS, and GitLab

Software Engineer Fellow

General Assembly | Sept 2019 - Dec 2019

- Developed skills in multiple programming languages and frameworks during a full time 500+ hour, 12-week Software Engineering Immersive program.
- Executed 4 front and back end web development projects with custom REST APIs and coding best practices, and utilized Git for version control. Completed MVP within 3 - 4 business days.

BOS.EATS | JavaScript, Node.js, Express, MongoDB, Mongoose, & AWS S3

- Collaborated in a full-stack, team project. Participated in daily stand-ups towards agile software development that resulted in an organized, cohesive team. Focused on user-friendly front end design while serving as quality control for an efficient, functional back end.

Wine Journal | JavaScript, jQuery, CSS, Bootstrap, & Handlebars.

- Full-stack development. Designed and constructed client-side SPA that resulted in user-friendly, responsive design. Implemented REST API with complete CRUD capabilities on Rails & Postgres for users to create and manage wine journal entries as well as implementing user authorization.

Server Waypoint | Mar 2018 - Mar 2020

AM Server Townsman | Sept 2016 - Jul 2018

Server Tico | Jun 2012 - May 2018

- Offered hospitality-driven service in upscale casual settings while prioritizing, multitasking, and problem-solving for seamless dining experience during often challenging and stressful situations.
- Created memorable guest experience through empathetic and thoughtful gestures that helped build relationships and retain loyal, returning guests.
- Trained and mentored new staff members on food & beverage programs and company culture. Extended help and support in team-driven environments.

PROJECTS

Work From Roam https://github.com/sei-uxdi-collab/work_from_roam-client

- Collaborate in an on-going web development in a team of 5 software engineers and 3 UX designers.
- Develop features based on UX-designed wireframes. Troubleshoot, debug, and upgrade web application towards different stages of software release lifecycle.
- Technologies: React, Google Maps API, Ruby on Rails, and PostgreSQL.

AirBLM <https://github.com/AirBLM/AirBLM-Website>

- Built a front end and beginning groundwork during the Equalithon for Justice for Black Lives with 2 other engineers. Integrated Airtable API to encourage and allow optimal involvement from non-coders in data collection.
- Technologies: React, Material UI, and Airtable API.
